## **INTRODUCTION**

Kentucky's Intended Use Plan (IUP) for the Drinking Water State Revolving Fund (DWSRF) is prepared in accordance with the provisions of the Safe Drinking Water Act Amendments of 1996 (Act)<sup>1</sup>. The IUP describes the sources and uses of funds for the 2005 State Fiscal Year (July 1, 2004 to June 30, 2005) and provides specific details regarding the state's prioritization process for ranking projects, short- and long-term goals, set-aside activities and the listing of eligible projects. The purpose of this IUP is to communicate Kentucky's DWSRF plan for 2005 to the state's public water systems (PWSs), the public, EPA and other state agencies.

The Kentucky Infrastructure Authority (KIA) and the Kentucky Environmental and Public Protection Cabinet (KEPPC) through the Division of Water (DOW) jointly administer the program via a Memorandum of Agreement in accordance with Kentucky Revised Statute (KRS) 224A.1115 and Kentucky Administrative Regulation (KAR) 200 KAR 17:070<sup>1</sup>.

### **I. DWSRF GOALS**

The primary goal of the DWSRF program is to assist PWSs in providing safe drinking water at an affordable cost to their customers. The program offers low-cost financing to PWSs for eligible drinking water infrastructure construction projects. Through set-aside funds, the DWSRF is also used to improve environmental programs that support the goals of the Safe Drinking Water Act (SDWA). Examples include capacity development, operator certification, source water protection, and wellhead protection. Effective and efficient administration of the DWSRF program, combined with below-market interest rates and long-term financing will assist PWSs to provide sufficient quality and quantity of affordable potable water throughout Kentucky. Progress is reported for each State fiscal year (SFY), which is from July 1 to June 30, in the Annual Report to EPA.

#### **A. Short-Term Goals**

1. Protect public health by providing funds for the supply of safe drinking water to the citizens of the Commonwealth of Kentucky and loans to water systems for infrastructure improvements needed to comply with safe drinking water regulations. Progress toward achieving this measure will be documented by reporting the number of binding commitments and the total dollar volume of assistance for the fiscal year in comparison with previous years.
2. Ensure compliance with the SDWA by working with KIA and KEPPC to ensure that water systems are in compliance with established standards and to provide all possible technical and financial assistance. Progress toward meeting this

---

<sup>1</sup> KRS Ch 224A.1115 and 200 KAR 17:070 may be found on the Internet from the Kentucky Legislature Home Page address: <http://www.lrc.state.ky.us/home.htm>

measure will be documented by reporting the number of meetings with systems to encourage application for listing or initiate application for the loan.

3. Assist in ensuring affordable drinking water by providing an efficient program that can offer low cost financing. Progress toward meeting this goal will be documented by reporting the interest rate offered to each borrower as well as the average interest rate to all borrowers.
4. Support components of the state drinking water and ground water programs by directing the necessary resources toward the State's most pressing compliance and health needs. Progress toward meeting this goal will be documented by reporting the annual number and dollar amount of commitments made to applicants in the highest ranked portion of the annual priority list.

## **B. Long-Term Goals**

1. Restore and maintain a safe drinking water supply in Kentucky by developing a DWSRF program capable of funding and technically assisting systems that annually pose the most serious risk to public health and compliance with the Act. Safe water includes the chemical, biological, and physical integrity of the water supply. The set-aside activities for state programs are used to support this goal and are described in the Set-Aside Activities section of this IUP. Also, source water protection set-aside activities are used to develop a multi-agency approach for identifying susceptible water sources and potential sources of contamination. Progress toward this goal will be documented by discussing the activities conducted during the year to ensure that the worst health problems are being addressed.
2. Maintain the fiscal integrity of the DWSRF by assuring a continuous enhancement of the loan Fund for future generations by complying with generally accepted accounting standards and the establishment of a lending rate policy that also provides for long term inflation. Progress toward this goal will be documented by discussion of changes to the lending rate policy, loan monitoring activities, and default information.
3. Maintain the fund in perpetuity by establishing a lending rate policy that produces sufficient repayments to allow for the growth of funds. This would be balanced by a concern for the ability of applicants to afford the costs of their projects and with the revision of guidance, as necessary, in the planning and design of efficient and cost-effective projects. Progress toward meeting this goal will be documented by providing information regarding lending rates and status of leveraging.

## **II. CAPACITY DEVELOPMENT OVERVIEW**

KRS Chapter 151 requires that the Kentucky Division of Water refuse to approve plans for any new water system that does not demonstrate that they will have the technical, managerial, and financial capacity to meet state and federal requirements. The Permits and Plans Review Section of the Drinking Water Branch continues to require substantial documentation for any major reconstruction or reorganization of existing public water systems prior to issuing approvals for projects to continue.

The strategy for existing systems continues to be carried out. The Technical Assistance and Outreach Section in the Drinking Water Branch continues to participate in EPA's AWOP program to assist PWSs in optimizing treatment processes, as well as working with the state's surface water systems to prepare for the requirements of the new Interim Enhanced Surface Water Treatment Rule and the Disinfectants/Disinfection By-Products Rule. Other technical assistance efforts are ongoing through the Kentucky Rural Water Association, Western Kentucky University's Small System Technology Center, the Kentucky Association of Counties peer review program, the DOW groundwater and wellhead protection programs, county water supply planning program, and other technical assistance initiatives.

## **III. CRITERIA AND METHOD FOR DISTRIBUTION OF FUNDS**

### **A. Eligible Applicants**

The primary use of monies in the DWSRF is to provide assistance to PWSs ranked on the project priority list. While the Act allows assistance to be given to privately owned PWS's, KIA is authorized to provide financial assistance only to governmental agencies.

The project priority list was developed through a survey of all eligible applicants and a request for eligible projects. In conjunction with the preparation of the project priority list, the KEPPC notifies eligible applicants in writing to submit project information. The project sponsor was required to submit project information no later than four months after receiving notice.

All applicants must show technical, managerial and financial capacity to ensure compliance with the Act. If a system does not have adequate capacity, financial assistance may only be provided to help that system achieve capacity.

### **B. Priority System**

Federal law requires that a project priority ranking system be established which will be used to determine the order in which projects will be evaluated for funding. As identified in section 1452(b) of the Act, Kentucky's priority ranking formula is

designed by DOW and based on the following criteria: (1) most serious risk to human health; (2) ensure compliance with the requirements of the Act; and (3) assist systems most in need on a per household basis according to State affordability criteria.

Projects were evaluated and assigned a score based upon the priority formula. A table of the ranking categories and point system is in Appendix A. The project priority list is in Appendix B, Table 1. Also included is a comprehensive list (Appendix B, Table 2), sorted by county, of all eligible construction projects proposed by PWSs that may be interested in requesting assistance from the DWSRF.

The highest ranked projects were contacted for the estimated date they would be ready to proceed with a loan application. Appendix B, Table 1, the Project Priority List, shows projects anticipated to request funding in 2005. The list also identifies those communities that are expected to qualify as disadvantaged or small systems (those serving populations fewer than 10,000).

### **C. Priority Order**

As required by the Act, to the maximum extent practicable, the highest priority projects are funded first. The projects chosen for funding are based on their readiness to proceed. Project score determines priority order on the Comprehensive List. In the event of ties in the ratings, priority will be given to the project serving the larger total population based on information maintained by KEPPC. In accordance with the MOA between DOW and KIA, KIA shall use the ranking criteria provided by DOW to generate the project-ranking list from the Water Resource Information System (WRIS). DOW will evaluate the projects through a prequalification process for scope changes to determine the final score. Each new project submitted by the application deadline is added to the list in priority order.

The WRIS is a database populated by information collected from water systems and local governments regarding facility needs. The database includes information on projects divided into three construction timelines: 0 to 2 years, 3 to 10 years and 11 to 20 years. The DOW only considered projects included in the 0 to 2 year timeframe as eligible for ranking during SFY 2005. Those projects not expected to be ready to go to construction for 3-20 years were listed separately from the other projects and not ranked.

### **D. Bypass Process**

A high priority project that does not have fiscal capacity or is not ready to proceed will be bypassed. If a project must be bypassed for any other reason, then the DWSRF staff will describe and justify the reason in each specific instance. The DWSRF staff will work with sponsors of bypassed projects to ensure to the maximum extent possible that the project will be eligible for funding in the

following year. A bypassed project will be returned to a priority order based on rank.

The prior Bypass Process gave bypassed projects priority over newly added projects on the priority list. However, bypassed projects will no longer be given a higher priority beyond the expiration of this IUP, and, as stated above, will be returned to the priority list based on score.

#### **E. Loan Application Deadlines**

The KEPPC requires each project to submit documentation to demonstrate qualifications and then sends a pre-qualification approval letter to the project sponsor for each fundable project. In order to be considered eligible for funding, a project may be required to submit planning documents, such as a preliminary engineering report and an environmental information document. A notice of the availability of funds is mailed to all new priority list project sponsors when funds become available. Applicants are required to submit the loan application information within four months of the notification.

If, eight months after the date of notification, all available funds are not committed, the KEPPC may return any applications that have not received loan commitments and bypass those projects. KEPPC will request pre-qualification information from the next highest ranked project. As described in the previous Priority Listing of Projects section, the bypassed projects identified in the priority list in Table 1 in Attachment B will be given a higher priority only until the 2006 IUP is drafted, and, as stated above, will then be returned to the comprehensive list based on score.

The KEPPC shall notify in writing all project sponsors added to the Project Priority List of the availability of funds and will request applications. Applicants must have met pre-qualification requirements and must submit complete applications within four months of being invited to submit.

Any Project on the Project Priority List that has not received a loan commitment within eight months may be bypassed and the next highest ranked project will be notified of fund availability. The standard four and eight month deadlines based on the notification date will apply.

Applications for assistance may be submitted at any time after notification of availability of funds and will be funded on a first-come, first-served basis. Funds shall be committed to a project designated to receive assistance upon Board approval of the application.

#### **F. Special Assistance**

To the extent eligible applicants are available, a minimum of 15 percent of all funds credited to the project fund will be used to assist systems serving fewer than 10,000

persons. The DWSRF currently has an excess credit that is banked and can be used toward future years.

#### **G. Emergency Projects**

The IUP project priority list may be amended during the year for declarations of emergencies. Emergency projects would include those where some type of failure was unanticipated and requires immediate attention to protect public health. As allowed by the Act, the DWSRF may add a project on an emergency basis to the IUP list without additional public review and comment. The emergency project must still meet all eligibility and loan requirements. Deviations from environmental review requirements may be necessary in emergency circumstances that demand immediate action. The EPA must approve these deviations.

#### **H. Refinancing**

Refinancing of existing projects will be allowed. Any project requesting to refinance existing debt must be on the project priority list in a position high enough to be eligible to receive funding and meet all program requirements.

### **IV. FINANCIAL STATUS OF DWSRF PROGRAM**

#### **A. Sources and Uses of Funds**

Kentucky's DWSRF is capitalized by appropriations by the United States Congress and the Kentucky General Assembly. The fund provides, in perpetuity, financial assistance to Kentucky's PWSs. During 2005, Kentucky will rely on funding as outlined in Table 1 to provide financial assistance to communities, support operations in KIA and DOW, and support related program activities. If there are insufficient projects ready to proceed during 2005, KIA will apply funds to projects on the 2006 priority list.

The FFY 2003 capitalization grant of \$9,746,200 combined with the FFY 2004 capitalization grant of \$10,110,200 will provide \$19,856,400 in federal funds to the Commonwealth in 2005. These grants will be matched with state funds of \$1,949,240 and \$2,022,040 for the 2003 and 2004 grants, respectively and \$1,028,720 in overmatch. The state match will consist of proceeds from the sale of \$5,000,000 in tax-exempt revenue bonds with debt service provided by the Commonwealth. The anticipated sale date of the bonds is June 23, 2004 with a June 30, 2004 closing. The KIA Board will apply for the FFY 2003 capitalization grant prior to July 1, 2004. Application for the FFY 2004 capitalization grant will be made prior to June 30, 2005. Additional project funding will be provided from a transfer of repayment funds from the Clean Water State Revolving Fund of approximately \$29,000,000. Transfers between the SRF programs are allowed up to a maximum of 33% of the total DWSRF capitalization grants received.

Table 1: Kentucky DWSRF Sources and Uses of Funds for 2005

<b>Funding Sources</b>	<b>Federal</b>	<b>State</b>	<b>Other</b>	<b>Total</b>
	<b>Contribution</b>	<b>Contribution</b>		
Uncommitted Prior Year Loan Funds			259,550	259,550
Loan Repayments*			5,857,441	5,857,441
Prior Years Capitalization Grants State Match		2,655,740		2,655,740
2003 Capitalization Grant	9,746,200	1,949,240		11,695,440
2004 Capitalization Grant	10,110,200	2,022,040		12,132,240
State Over Match		972,980		972,980
Transfer from Clean Water SRF Repayments			29,000,000	29,000,000
State Program Management Expenditure Match		1,985,640		1,985,640
<b>Total Funding Sources</b>	<b>19,856,400</b>	<b>9,585,640</b>	<b>35,116,991</b>	<b>64,559,031</b>
<b>Funding Uses</b>				
Financial Assistance	16,010,001	7,600,000	35,116,991	58,726,992
2003-2004 Administration (4%)	794,256			794,256
2003-2004 State Program Management (10%)	1,985,640	1,985,640		3,971,280
2003-2004 Technical Assistance (2%)	397,128			397,128
2003 Local and Other Assistance (2.2%)	214,416			214,416
2004 Local and Other Assistance (4.5%)	454,959			454,959
<b>Total Funding Uses</b>	<b>19,856,400</b>	<b>9,585,640</b>	<b>35,116,991</b>	<b>64,559,031</b>

\* Includes Principal and Interest repayments received as of May 31, 2004 (including investment income) and anticipated repayments through June 30, 2005.

## **B. Financial Terms of Loans**

### **1. Funding Limit**

Kentucky's DWSRF has a \$4,000,000 limit on the amount of funds that will be available to any one borrower from a specific capitalization grant. A funding limit was implemented to allow more projects to have access to low interest SRF funds and to maintain an acceptable risk level on the long-term viability of the DWSRF Loan Fund account.

The DWSRF may provide project funding for initial project construction over a period of years for particularly large, expensive projects. Funding for subsequent phases will be considered a top priority for subsequent years. A phased project that is actually separate projects will be ranked separately and will be funded separately, not incrementally, according to its priority ranking.

### **2. Interest Rates**

The KIA Board establishes a standard interest rate and a hardship interest rate for the program at the beginning of each state fiscal year. The rates are based on the

prevailing market conditions, availability of funds, and funding demand. Interest rates for SFY 2005 are anticipated to be 3% and 1% for the standard and hardship rates respectively. Qualifications for rates are subject to 200 KAR 17:070.

Planning and design loans will be made at the standard rate during the planning and design phase of the project. Should the planning and design loan be rolled into a construction loan, the rate on the planning and design loan amount will revert to the rate approved for the construction loan.

### **3. Repayment Terms**

Planning and design loans will have a five-year repayment term. Should the planning and design loan be rolled into a construction loan, the term for the planning and design loan amount will revert to the term approved for the construction loan. Construction loans will have a twenty-year repayment term. At the KIA Board's discretion, the repayment term for a construction loan for hardship communities may be extended to thirty years, but not beyond the expected design life of the project. At no time will an amount greater than or equal to 30% of the capitalization grant be provided as subsidy to disadvantaged communities.

Principal and interest payments on each loan will commence not later than 1 year after completion of the project for which the loan was made. The recipient of each loan must establish a dedicated source of revenue for the repayment of the loan.

### **4. Loan Servicing Fees**

A loan servicing fee of 0.25 percent on the annual outstanding loan balance will be charged as a part of each semi-annual loan payment in accordance with 200 KAR 17:070, Section 12. The fee is assessed to recover administrative expenses incurred over the life of the loan. These fees are accounted for outside of the program fund and will be used for necessary DWSRF program expenses.

### **5. Financial Options of the Fund**

The Act provides guidelines under which the DWSRF program is to be operated. However, the specific implementation of those guidelines affects the long-term financial feasibility of the fund. The following are allowable options within the DWSRF and Kentucky's treatment of each.

- a. Loan Subsidies – While the Act allows up to 30% of the fund to be used for negative interest loans or principal forgiveness; Kentucky does not offer this type of subsidy. Due to the relative newness and size of the fund, KIA and DOW realize the importance of growing the fund, not reducing it to the detriment of future borrowers. The current affordability criteria allow for a lower rate to be offered to hardship communities.

- b. Set-Asides – The Act allows up to 31% of the fund to be used as set-asides. However, fund dollars used as set-asides are not available for loans. KEPPC and KIA use a team approach to carefully plan and monitor the set-asides.
- c. Borrower Repayment – The borrower’s ability to repay has a direct effect on the amount of funds available. A thorough credit analysis is performed for each borrower. Loan monitoring is performed throughout the life of the loan.
- d. Leveraging – Should demand increase significantly for DWSRF loans, KIA will consider leveraging the fund to increase the dollars available for financial assistance.

## **V. SET-ASIDE ACTIVITIES**

Federal regulations allow states to “set aside” up to 31 percent of capitalization grant funds for various programs, aside from project loans, that support the Act. Kentucky will set aside 18.2 and 20.5 percent of the 2003 and 2004 available capitalization grants, respectively. The following is a list of Kentucky’s set-aside uses:

### **A. DWSRF Administration - Sect. 1452(g)(2) – 4 percent maximum**

Section 1452(g)(2) of the SDWA allows up to 4 percent of a DWSRF capitalization grant to be set aside for administration of the DWSRF program.

Kentucky will set aside four percent of each of the 2003 and 2004 capitalization grants for administration. Three percent of each grant will be designated for the DOW and one percent of each grant will be designated for the KIA.

The KEPPC and KIA conduct regular activities to develop and maintain the DWSRF program. These include reporting activities, payment processing, pre-application activities, travel, application review, engineering review, construction progress inspection, training, portfolio management, audit management, cash management, securities management, financial management, and technical assistance.

Funds not obligated within one fiscal year of receipt of a capitalization grant award shall be reserved for use in future years.

### **B. State Program Management – Sect. 1452(g)(2)(A) - 10 percent maximum**

The Act allows a state to set aside 10 percent of its annual capitalization grant to support other program initiatives of the SDWA as follows:

- Supplement Public Water System Supervision Program
- Technical Assistance through Source Water Protection
- Development/Implement Capacity Development Program
- Development/Implement Operator Certification Program

The Program Set-Asides require an additional one-to-one state match. Thus, money diverted to these set-asides will demand a heavier investment of state funds. Kentucky will set aside 10 percent of each of the 2003 and 2004 capitalization grants to the DOW to supplement the PWSS program as follows:

1. Conduct non-regulatory Surface Plant Comprehensive Performance Evaluation (CPE) in order to increase the number of surface water treatment plants that are in compliance with current federal regulations and prepare the plants for implementation of the Interim Enhanced Surface Water Treatment Rule. Perform an additional number of file reviews, plans review, inspections, sanitary surveys, and complaint responses.
2. Other activities under may include, but are not limited to: tracking consumer confidence reports; preparing and issuing annual compliance reports; evaluating infrastructure needs for the Needs Survey; determining and approving log inactivation and removal credits for new or modified water treatment plants; tracking new standards for disinfection/disinfectant byproducts, arsenic, radon, *Cryptosporidium*, and others when regulations are promulgated by EPA; and monitoring waivers and variances.

Funds not obligated within one fiscal year of receipt of a capitalization grant award shall be reserved for use in future years.

**C. Technical Assistance – Sect. 1452(g)(2)(D) - 2 percent maximum**

The Act allows a state to set aside 2 percent of its annual capitalization grant to support technical assistance initiatives of the SDWA as follows: leak detection and water loss reduction, non-community PWS groundwater under the direct influence of surface water determinations, compliance assistance as determined by the state, establishment of cross-connection control programs, development of environmental review documents for DWSRF projects, and PWS financial and managerial evaluations.

Kentucky will set aside 2 percent of each of the 2003 and 2004 capitalization grants to provide technical assistance to small systems (PWSs that serve populations less than 10,000 people).

Funds not obligated within one fiscal year of receipt of a capitalization grant award shall be reserved for use in future years.

**D. State/Local Assistance – Section 1452(k) - 15 percent total, 10 percent maximum for any one activity**

Section 1452(k) of the SDWA allows up to 15 percent of the DWSRF capitalization grant to be set aside to support local assistance and other program initiatives of the

SDWA with a 10 percent maximum for the individual program areas as outlined below.

- Loans for Source Water Protection through Land Acquisition or Conservation Easements
- Loans Source Water Quality Program
- Technical, Managerial, or Financial Assistance for Capacity Development Program
- Wellhead Protection Program

Kentucky will set aside 2.2 percent and 4.5 percent of the 2003 and 2004 capitalization grants, respectively, to supplement DOW program initiatives as follows:

- Support of the Wellhead Protection Program as allowed under Section 1452(k)(2)(E) – Activities include, but are not limited to: develop and review wellhead protection plans for systems in the 5-year update cycle; assist PWSs with problems and issues related to groundwater quality and quantity; develop contaminant source inventories for wellhead protection areas to update GIS coverages; conduct Groundwater Protection Plan program inspections in wellhead protection areas; conduct wellhead protection program reporting; training; travel; and the sample collection, analysis and evaluation of groundwater quality at PWSs using groundwater.
- Support for the Technical, Managerial, or Financial Assistance for Capacity Development Program as allowed under 1452(k)(2)(C) - Activities may include, but not be limited to: evaluation of proposed and existing PWSs and continuing evaluation of existing PWS to meet the financial, managerial, and technical capacity to operate in compliance with the SDWA; development of a computerized statewide water budget approach as a basis for making water allocation and watershed management decisions.

State/Local Assistance Program funds not obligated within four fiscal years of receipt of the capitalization grant shall be transferred to the project loan account.

## **VI. FUND TRANSFERS BETWEEN THE CWSRF AND THE DWSRF**

Transfers between the SRF programs are allowed up to a maximum of 33% of the total DWSRF capitalization grants received. KIA proposes to transfer the maximum allowable 33%, which is approximately \$29 million, of uncommitted repayment funds from the Clean Water SRF to the Drinking Water repayment fund. The funds will be distributed using the same criteria and method for the regular funds, as described in this IUP. Funds not transferred within one fiscal year of receipt of a capitalization grant award shall be reserved for transfer in future years.

**APPENDIX A**

Table 1 – Priority Points			
Rating Factor	Points Available		
1. Resource Development			
(a) Elimination of Public Water Systems Through Mergers			
(i) Systems Serving 500 or Fewer Population	25		
(ii) Systems Serving 501 - 3,300 Population	20		
(iii) Systems Serving 3,301 - 10,000 Population	15		
(iv) Systems Serving 10,001 or Greater Population	10		
(b) Interconnections			
(i) Elimination of Water Treatment Plants	25		
(ii) Supplement Potable Water Supply	15		
(iii) Emergency Backup Potable Water Supply	5		
(c) Source Water Quantity and Quality			
(i) Replace Existing Raw Water Source	15		
(ii) Supplement Existing Raw Water Source	15		
2. Water Treatment			
(a) Microbiological and Turbidity			
(i) CT Removal Requirements	25		
(ii) CT Inactivation Requirements	20		
(iii) Finished Water Turbidity	20		
(b) Best Available Technologies			
(i) VOCs, IOC, SOC, and Radionuclides	20		
(ii) Disinfectants and Disinfection By-Products	15		
(iii) Secondary Contaminants	10		
3. Water Distribution			
(a) Pressure			
(i) Inadequately Sized Water Lines	10		
(ii) Inadequate Distribution Storage	10		
(iii) Leaks, Breaks, or Restrictive Flows Due to Age	10		
(b) Quality			
(i) Inadequate Turnover of Water	10		
(ii) Inability to Maintain Disinfection Residual	10		
(iii) Replace Lead, Copper, Asbestos Cement Lines	10		
4. Extension of Service for Public Health Protection			
(a) Source Water Quality and Availability	10		
5. Public Water System Financial Need			
(a) MHI less than 80% of the State Median	4		
(b) MHI less than the State Median and 80% or more of the State Median	2		

## **KENTUCKY DRINKING WATER STATE REVOLVING FUND INFRASTRUCTURE CONSTRUCTION PROJECTS**

### **PRIORITY SYSTEM (2003 CAPITALIZATION GRANT)**

#### *PURPOSE*

The Drinking Water State Revolving Fund (DWSRF) Priority System was developed to prioritize eligible projects for funding from the DWSRF. The DWSRF funds are intended to facilitate a Public Water System's (PWS) ability to obtain and maintain financial, managerial, and technical capabilities for compliance with the Safe Drinking Water Act (SDWA). This includes compliance with existing and future national drinking water standards or other activities to significantly further the health protection objectives of the SDWA.

#### *METHODOLOGY*

The structure of the priority system incorporates new rules and initiatives promulgated since the 1996 amendments to the SDWA. The amendments include: Financial, Managerial, and Technical Capacity - Surface Water Treatment Rule - Total Coliform Rule - Lead and Copper Rule - Asbestos Standard - Capacity Development - Enhanced Surface Water Treatment Rules - Disinfectants and Disinfection Byproducts Rule - Groundwater Rule - and Best Available and Affordable Technology) with minor modifications. Projects are prioritized based on a Priority Formula and a Tie Breaker.

#### *Priority Formula*

Violations of drinking water standards occur primarily as a result of inadequate infrastructure (which is fundable from the DWSRF) or as a result of poor operation (which is not fundable from the DWSRF). Therefore, a proactive approach was developed to set priorities based on infrastructure needs to achieve and maintain compliance with national drinking water standards or otherwise promote the public health objectives of the SDWA

#### *Tie Breaker*

The tie breaker was developed to consider three factors: maintaining priorities to be funded in the order as set forth by the priority formula, expending DWSRF dollars to maximize the benefit toward compliance with the SDWA, and providing funding of projects that are affordable to the households that benefit from the project.

The tie breaker first considers the size of PWSs. PWSs that serve less than 10,000 are prioritized higher than PWSs with a population of 10,000 or more. The tie breaker then calculates the DWSRF project cost per household that benefits from the project and assigns the highest priority to the project with the lowest cost per household.

## APPLYING THE PRIORITY SYSTEM TO PROJECTS

The Division of Water, Drinking Water Branch, assigns points in each of the five categories (Resource Development - Water Treatment - Water Distribution - Extension of Service for Public Health Protection - Public Water System Financial Need) to projects as described below and as shown above in Table 1, Priority Points. Points are based on information supplied by PWSs and their consultants. The project priority points will be the sum of all points assigned to each of the five categories.

### Resource Development

This category allows affordable alternatives for a PWS to obtain and maintain financial, managerial, and technical capabilities to comply with the SDWA. Projects may include, but not be limited to: intakes, wells, raw and finished water lines, and pump stations.

*Elimination of Public Water Systems Through Mergers* - A PWS (i.e. trailer park) with its own water supply may not be financially capable of complying with the SDWA. A possible solution includes merger with another willing PWS that has the capabilities to maintain compliance.

*Interconnections* - A PWS that has a water treatment plant that needs to be rehabilitated, modified, or expanded to comply with the SDWA and meet existing demands may determine that a more affordable alternative would be to interconnect with another PWS to replace or supplement its water treatment facilities.

*Source Water Quantity and Quality* - A PWS is responsible to ensure that sufficient quantity (for drought vulnerable PWSs) and quality (based on existing water treatment capabilities) of raw water is available to meet existing demands. An affordable solution may be to secure a new source to replace or supplement the existing source rather than to provide additional treatment, interconnection or merger with another PWS. Reservoirs, dams, dam rehabilitation, and water rights are prohibited from funding by the DWSRF.

### Water Treatment

This category allows a PWS to comply with the Surface Water Treatment Rule (SWTR) and the national drinking water standards of the SDWA.

*Microbiological and Turbidity* - The sub-categories listed allow a PWS to comply with the bacterial and viral contamination standards of the SWTR.

“Pre-filtration” refers to treatment processes to comply with CT removal requirements of the SWTR. Treatment processes include, but are not limited to: pre-settling basins, rapid mix, flocculation, sedimentation, baffling of flocculation and sedimentation basins, and chemical feeders for proper coagulation.

“Disinfection Process” refers to disinfection techniques to comply with CT inactivation requirements of the SWTR. Disinfection techniques include, but are not limited to: pre-chlorination, post chlorination, and baffling of clearwells.

“Filtration” refers to filtration processes to comply with turbidity requirements of the SWTR. Filtration processes include, but are not limited to: filter media, filter surface wash, backwash pumps, filter underdrains, and continuous turbidity monitors.

*Best Available Technologies* - The sub-categories listed allow a PWS to comply with chemical contamination standards of the SDWA. Treatment processes include, but are not limited to: aeration towers, ion-exchange, and iron and manganese removal.

## **Water Distribution**

This category allows a PWS to comply with the Surface Water Treatment Rule (as it relates to disinfection residual), Total Coliform Rule, Lead and Copper Rule, and the Asbestos Standard. Projects may include, but are not limited to; installation, refurbishment, or replacement of raw and finished water lines; installation, refurbishment, replacement, or baffling of potable water storage facilities; pump stations in relation to storage facilities; elimination of constantly running or hydro-pneumatic pump stations; looping of water lines; flushing devices; and disinfection booster stations.

## **Extension of Service for Public Health Protection**

This category allows water line extensions to serve an area where households have insufficient financial and technical capabilities to maintain water supply systems that comply with the SDWA.

## **Public Water System Financial Need**

This category provides additional points based on the median household income of the PWS service area.

### **Restrictions**

Priority formula points are credited absolutely or not at all with the following restrictions:

1. New water treatment plants are limited to Finished Water Turbidity - 2(a)(iii) - unless a need for best available technology based on raw water quality is demonstrated. Construction of new water treatment plants is allowed to replace existing facilities only when the cost of upgrading for compliance with the SDWA is not determined to be the best affordable alternative over the lifetime of the project or when a PWS demonstrates, for public health protection, that existing household water system contamination exists and no other PWS is capable of serving the area.

2. Expansion of existing water treatment plants is limited to Finished Water Turbidity - 2(a)(iii) - unless a need for best available technology based on raw water quality is demonstrated. Expansion of existing water treatment plants is allowed only when the flow rates of existing plants are reduced to comply with the SDWA, resulting in insufficient capacity to meet existing demands or when the state institutes a water line extension or water tap-on ban due to insufficient capacity to meet peak periods of existing demand.
3. Points for Inadequately Sized Water Lines - 3(a)(i) - are allowed only when the need applies to at least twenty (20) percent of all waterlines included in the project and documentation supports reduced pressures and flows that have resulted in or may result in noncompliance with the Total Coliform Rule or the Surface Water Treatment Rule (as it relates to disinfection residual).
4. Points for Leaks, Breaks, or Restrictive Flows Due to Age - 3(a)(iii) - are allowed only when the need applies to at least twenty (20) percent of all water lines included in the project and documentation supports reduced pressures and flows that have resulted in or may result in noncompliance with the Total Coliform Rule or the Surface Water Treatment Rule (as it relates to disinfection residual).
5. Points for Replace Lead, Copper, or Asbestos Cement Lines - 3(b)(iii) - are allowed only when the need applies to at least twenty (20) percent of all water lines included in the project and documentation supports existing or potential noncompliance with the Lead and Copper Rule or the Asbestos Standard.
6. Points for Inadequate Distribution Storage - 3(a)(ii) - will not be allowed for additional storage in excess of the one-day storage need for existing customers.
7. Points for Source Water Quality and Availability - 4(a) - are allowed only when the need applies to at least fifty (50) percent of the customers connecting to the proposed waterlines. Note: Bacteriological samples submitted in support of the project need must comply with the sample collection requirement as outlined in the state Regulation - 401 KAR 8:200 Section 1(7).

## **KENTUCKY DWSRF SET-ASIDE**

### **LAND ACQUISITION AND CONSERVATION EASEMENTS FOR SOURCE WATER PROTECTION**

#### **PRIORITY SYSTEM**

##### *Local Assistance*

Under the Safe Drinking Water Act (SDWA) Amendments of 1996, states have been given authority and funds with which to assist public water supplies with development and/or implementation of local drinking water protection initiatives (Section 1452(k)). This assistance is to help these utilities achieve or maintain compliance with SDWA requirements and protect public health.

##### *Minimum Eligibility Criteria*

Eligibility for Drinking Water State Revolving Fund (DWSRF) loans depends upon the applicant's ability to meet certain minimum criteria established to ensure funding is directed at projects that conform to the SDWA. The following criteria must be met before an application can be placed on the land acquisition priority list:

- The land to be purchased must be located within a state-approved wellhead protection or delineated surface water protection area.
- The land acquisition is needed to ensure compliance to meet standards, protect public health, or protect drinking water supply.

Funds can be released only after the following criteria are met:

- The project must be listed on the land acquisition priority list.
- The landowner must be a willing seller.
- The Public Water System must have the financial, managerial, and technical capabilities to comply with the SDWA, or the project will allow the system to obtain said capabilities.
- Land acquisition must be consistent with the protection plan of an approved county water supply plan; otherwise, the Division of Water (DOW) must approve an amendment to the plan.
- The loan agreement must meet a number of conditions, including: the land cannot be resold while the drinking water source is still being used; conservation easements must be recorded in land records; land-use activities cannot be modified if the modification has the potential to threaten water supply quality.
- The site must be determined not to contain a potential Superfund site.

Projects that are not ready to proceed six months after EPA has approved the DWSRF capitalization grant will be bypassed and funds reallocated to the next project on the list. Readiness to proceed with the land acquisition is demonstrated through the applicant's progress in documenting the commitment and willingness by the seller, commitment of other funding, and resolution of any other barriers to acquisition.

#### *Rationale for Formula*

The rationale for funding land acquisition is defined under the Safe Drinking Water Act. Four key principles apply to the priority-setting process for eligible projects:

- *Ensure compliance to meet standards* – One component of the formula assigns the applicant additional points for non-compliance, assuming the land acquisition or easements will address the compliance issue. [Sec. 1452(k)(1)(A)(i) & Sec. 1452(b)(3)(A)(ii)]
- *Protect public health* – Acquisition of the water supply area can protect human health by providing the public water supply greater control over the water source, thus assisting in compliance and making treatment more economical. [Sec. 1452(b)(3)(A)(i-iii)]
- *Protect the source water* – Through DWSRF land acquisitions, the Division of Water is encouraging Public Water Systems to take preventive measures in protecting water supplies. There are a number of ways that source water quality can be threatened. Finished or source water may exceed the MCL for a contaminant or contaminants, levels of which can gradually increase and make treatment difficult or expensive. Land-use activities or development in the direction of the water supply can also threaten water quality. For contaminants that cannot readily or economically be treated, source water protection by acquiring a piece of vulnerable property can be a valid and economical option. [Sec. 1452(k)(1)(A)(i)]
- *Assist hardship communities* – Smaller communities and systems with higher usage bills are given preference in the prioritization formula. [Sec. 1452(b)(3)(A)(iii)]

#### *Land Acquisition or Easements [Sec. 1452(k)(1)(A)(i)]*

Kentucky has opted to promote non-regulatory solutions for water supply protection by using a portion of the set-aside funds to provide assistance to public water systems, in the form of loans, to acquire land or conservation easements for water supply protection. Priority of applications will be determined according to the following point system:

#### *System Type*

Community and non-transient systems, being year-round water consumers, are at greater risk to disease from pathogens or toxins in the water supply than consumers of transient water systems are.

- 10 pt Community or Non-transient non-community
- 5 pt Transient non-community

#### *Population Served*

- 150 pt  $\leq 3,300$  people
- 100 pt  $> 3,300$  &  $\leq 10,000$  people
- 50 pt  $> 10,000$  people

#### *Hardship Need*

The criteria for *Hardship* need is scored by the ratio of the residential water bill for 4,000 gallons of usage to the median household income for the service area, expressed as a percentage.

- 9 pt  $> 1.75\%$
- 6 pt  $> 1.25\%$  &  $\leq 1.75\%$
- 3 pt  $\leq 1.25\%$

#### *Source Type*

Source Type scoring is based on the sensitivity of the source to contamination. Sensitivity is an assessment of the physical fate and transport of a contaminant in surface water or groundwater. Source types are rated on their recharge, flow velocity, and dispersion characteristics. Priority is given to sources with high turnover rates to address acute contamination problems, based upon time of travel.

- 15 pt Spring, surface water, or groundwater under direct influence of surface water (e.g. karst)
- 10 pt Groundwater unconfined aquifer, not under direct influence of surface water
- 5 pt Groundwater confined aquifer

#### *Proximity of Property to Intake/Wellhead*

Criteria for scoring *Proximity to intake/wellhead* are based on the travel time of a contaminant to reach a surface water intake or a well. (Surface water delineations are being revised. To avoid confusion for this year's list, please include a photocopied 8.5x11 inches USGS 7.5 minute [at that scale, 1:24,000, not enlarged or reduced] topographic map showing the location of the project and the location of the drinking water supply intake or wellhead. If the intake or well does not show on the map, send a detailed description with accurate direction and distance in miles from the project to the intake or well. Reviewers in the Drinking Water Branch will award the appropriate points.)

### *Project Size*

*Project size* is the acreage of the project area expressed as a percentage of the total delineated surface water or wellhead protection area or spring recharge area.

- 150 pt Greater than 50%
- 100 pt  $> 10\%$  &  $\leq 50\%$
- 50 pt  $\leq 10\%$

### *Compliance Status*

To earn points for *Compliance status*, noncompliance must be a result of the water supply source that is not under the control of the public water supply, and the project must address the non-compliance issue. Only the most severe category will apply:

- 400 pt Water system is out of compliance because monitoring has indicated a contaminant level exceeding the MCL or action level.
- 300 pt Water system is required to conduct additional monitoring because a contaminant level indicated by previous monitoring requires additional monitoring.
- 200 pt Water system is not out of compliance or conducting increased compliance monitoring, but monitoring indicates a trend of increasing levels, and it is probable that a compliance problem will develop.

### *Susceptibility Reduction*

If the land has been identified in a surface water protection area (SWPA) or wellhead protection area (WHPA), Zones I or II, under the SWAPP process, and has a medium or high susceptibility, the property is a priority for acquisition under this funding program. Following purchase of the land and implementation of this project, are contaminant or susceptibility reductions expected as a result of this project? Documentation to support reduction claims must be provided. Some land-use activities can pose a greater threat to the water supply. For example, residential areas that are unsewered pose a greater risk for nitrate and pathogen contamination. Documentation should be provided to link any existing drinking water problems to the source water area. Valid types of documentation are results of dye tracing, presence or absence of chemical/biological indicators, proof of duration of data collection, summaries of land-use activities. Trend implications or consistency of data to document the problems or documentation that the parameters of concern seen in the data set are consistent with the suspected activities or sources thought to be causing the problems may also be included.

- 200 pt Expected reductions in contaminant or susceptibility in SWPA/WHPA Zone I
- 100 pt No or negligible reductions in contaminants, but reductions in susceptibility in SWPA/WHPA Zones I or II

### *Protection Effectiveness*

This category evaluates the degree to which a threat or potential threat will be addressed by acquisition of the source water area. Existing and future land uses can affect a water supply. The degree to which acquisition will be effective for protection is evaluated by the degree of control over the area that will result from the acquisition. Documentation should be provided to illustrate how the purchase or easement will protect the water supply; also, documentation should be provided to link any potential drinking water problems to the source water area. The extent and certainty of the data will be a factor in the determination of the project's effectiveness. Valid types of documentation are results of dye tracing, presence or absence of chemical/biological indicators, summaries of current and planned land-use activities.

- 300 pt No contaminants present, or to be allowed – no development
- 200 pt No development beyond what is already present
- 100 pt Limited development only

### *Source Priority Designation – Tie Breaker*

For projects scoring the same number of points, *Source priority designation* may be used to break ties. For areas being considered for acquisition that will also help alleviate another identified problem, a maximum of 15 additional points may be awarded. Water supply areas that fall under the following designations qualify for additional points:

- 15 pt Priority watershed under Agricultural Water Quality Act, Priority watershed under Section 319 or Priority watershed under Section 303(d)
- 5 pt Watershed includes Outstanding Resource Waters or High Quality Waters

TABLE 1

## DWSRF 2003-2004 INFRASTRUCTURE PROJECT PRIORITY LIST

County	Population	Score	DWSRF#	WRIS#	PWSID	Applicant	Project Description	Status	Total Project Cost	DWSRF Funds	
										Requested	Expected Funding
Knott	N/A	329	854	WX21119100	0600062	Knott County W&SD	Carr Creek Lake Water Project	B00-Pending	\$ 7,000,000	\$ 1,749,500	\$ 1,749,500
